Pair a Zone with Your Satellite Server

Last Modified on 2026-11-05

1. On the **Zones** screen, click **Pair zone**.

2. Enter the URL of the zone to pair with and its name. Enable the**Content**, **Managed** or **Connectors** options according to your needs. Click **Confirm**.

You'll be prompted to log into the zone you want to pair with the local Application Workspace Satellite Server. Use administrator credentials that have the **Create servers** privilege.
