MCP Server Overview

Last Modified on 2026-11-18

By adding a Right Click Tools MCP Server, you can run RCT actions as requests to your AI tools.

You can set up a Right Click Tools integration within GitHub Copilot Desktop, GitHub Copilot CLI and Visual Studio Code.

- GitHub Copilot Desktop Setup
- GitHub Copilot CLI Setup
- VS Code Setup

The Right Click Tools MCP Server is available to both RCT Enterprise customers and Community users. Enterprise customers will typically be able to run 75+ Right Click Tools actions, while Community users can access a subset of about 30 actions. See the full list of available actions.

Minimum Right Click Tools Version: 5.12.2608

NOTE: Right Click Tools Enterprise licenses are not subject to rate limiting. Community licenses are limited to 10 requests every 15 minutes.

For a walkthrough of MCP Server setup and use, see Jeff Scripter's video on our YouTube channel:Introducing the Recast Right Click Tools MCP Server.
