## **Refresh Updates Compliance State**

The **Refresh Updates Compliance State** tool allows a console user to refresh the update compliance state of a device in ConfigMgr. This tool can be run on single devices, multi-selected devices, or with a similar tool designed to run on a device collection.

This tool uses Remote WMI.

To run this tool:

1. In your Configuration Manager console, right-click on a device.

## 2. Click Right Click Tools > Client Tools > Refresh Updates Compliance State .

As the tool runs on the selected device(s), they're displayed according to status (successful/unsuccessful). Log messages are available at the bottom of the window.
