

Configuration Overview

Last Modified on 07.20.23

Before you can collect warranty information with Endpoint Insights, you'll need to configure some settings in the Recast Management Server interface.

RMS Configuration Workflow

- [Assign Roles to Users](#)
- [Configure a Recast Proxy for Warranty Information Collection](#)

Once RMS configuration and [Agent installation](#) are complete, you can manually kick off a warranty scan on your Recast Management Server's **Warranty** page by clicking **Start EI Warranty Scan**. You can also wait for the scan to run automatically overnight.

NOTE: Recast Agents will take time to deploy and report their data back to the ConfigMgr database. By default, the hardware inventory cycle can take **up to 7 days**. Adjusting the time to install and increasing the frequency of reporting back to ConfigMgr can shorten this delay significantly.
