

Configure Applications

Last Modified on 05.15.24

View the Application Manager Catalog

The **Applications** page in your Recast Management Server interface displays Application Manager's entire catalog. The applications available for you to deploy are determined by your Application Manager licensing. For more information, see [Application Manager Catalog](#).

Application details include:

- **Vendor**
 - **Application** name
 - **Date Added:** Sorted by most recent release date by default
 - **Deployment Processes** that include the application
 - **Version Currently Installed** (This information will be available in a forthcoming release)
 - **Version to be Deployed**
 - **Actions:** [Deploy an application immediately](#) or [remove an application from a deployment process](#)
-

Deploy Applications

To deploy an application:

1. Navigate to the **Applications** page in your Recast Management Server.
2. Search for the application to deploy.
3. Click the **Deploy** button to the right of the application to deploy.

Applications

Vendor	Application	Date Added [ⓘ]	Deployment processes	Version Currently Installed	Version to be Deployed	Actions
 VideoLAN	VLC Media Player (Finnish) (x86)	11/6/2023	0		v3.0.20	 Deploy
 VideoLAN	VLC Media Player (Finnish) (x64)	11/6/2023	0		v3.0.20	 Deploy
 VideoLAN	VLC Media player (English) (x86)	11/6/2023	0		v3.0.20	 Deploy
 VideoLAN	VLC Media Player (English) (x64)	11/6/2023	1		v3.0.20	 Deploy

If the application is already included in an existing deployment process, the [Reimport Application](#) side panel will open.

If the application is not already included in a deployment process, clicking **Deploy** will open a panel where you can add a deployment process.

To add a deployment process:

1. In the **Select Application(s)** side panel, search for and select the applications to deploy with this deployment process. Click **Next**.
2. Name the deployment process and click **Next**.
3. From the list of collections drawn from your Configuration Manager environment, select the device or user collection to which you'll deploy the applications. Click **Save & Close**.
4. On the **Deployment Process Details** page that opens next, configure the duration of the deployment process. You can [deploy the application to more collections](#) and/or [add a delay](#) prior to a deployment step. When done, click **Save**.

Reimport Applications

If a deployment process is deleted and recreated, or an application is accidentally deleted from your Configuration Manager console, you can reimport an application version without the need to wait until a new version is published in the Application Manager catalog. Reimporting an application removes it, and any deployments that include it, from Configuration Manager. The application and deployments are then recreated using the current Application Manager deployment process settings.

You can reimport applications from either the **Applications** page or the **Deploy Process Details** page in your Recast Management Server.

To reimport an application:

1. On the **Applications** page, click the **Deploy** button to the right of the application to reimport.

Applications

Vendor	Application	Date Added [ⓘ]	Deployment processes	Version Currently Installed	Version to be Deployed	Actions
 VideoLAN	VLC Media Player (Finnish) (x86)	11/6/2023	0		v3.0.20	 Deploy
 VideoLAN	VLC Media Player (Finnish) (x64)	11/6/2023	0		v3.0.20	 Deploy
 VideoLAN	VLC Media player (English) (x86)	11/6/2023	0		v3.0.20	 Deploy
 VideoLAN	VLC Media Player (English) (x64)	11/6/2023	1		v3.0.20	 Deploy

TIP: You can also find the **Reimport Applications** option on the **Deployment Process Details** page by clicking the vertical ellipsis.

2. In the **Reimport Application** side panel that opens, choose whether to redownload the application version to the Application Manager catalog.

3. Click **Reimport Application(s)**.

Manage Applications in a Deployment Process

You can manage the applications included in an Application Manager deployment process straight from the **Deployment Processes** page in the Recast Management Server interface.

Click on a number in the Applications column to view, add or remove applications. The list of applications is searchable and sortable.

Sort the Application List

By default, the application list is sorted in ascending order, first by vendor and secondly by application name. Where sorting is applied, the selected options appear next to the column header label.

To sort the application list differently:

1. Click on a column header one or more times to cycle through and select sorting options.
2. Click **Save & Close** to save your changes.

Select Application(s)

Select the applications you want to deploy during the deployment process.

3 applications

Adobe Adobe Digital Editions en-US X86

Adobe Adobe Connect application en-US X86

Adobe Acrobat Reader DC (MUJ) (x64) mul X64

Add an Application to a Deployment Process

To add an application:

1. In the **Select Application(s)** side panel, click the checkbox to the left of the application to add.
2. Click **Save & Close**.

Remove an Application from a Deployment Process

To remove an application:

1. In the **Select Application(s)** side panel, click the **X** to the right of the application to remove it.

2. Click **Save & Close**.

Remove an Application from a Deployment Process

You can remove an application from an existing deployment process on the **Applications** page in the Recast Management Server interface. When an application is removed, the deployment process will no longer install newer versions of the application. If you remove the only application included in the deployment process, the deployment process itself will be deleted. Old versions of the application will remain in Configuration Manager.

To remove an application from a deployment process:

- 1. Navigate to the **Applications** page in the Application Manager section of your Recast Management Server.
- 2. Click the **X** to the far right of the application that you want to remove.
- 3. Confirm the deletion.
