

RECAST SOFTWARE

Configure Scopes for Right Click Tools

Last Modified on 08.29.24

Recast Scopes are lists of devices. Beginning with Recast Software Version 5.0, scopes are created automatically in the background when you [create a route](#) or limit user permissions to a set of devices. A user assigned a role and its associated permissions will automatically be allowed to perform tasks within a specific scope, which may include certain devices, users, AD OUs, or AD groups.
