

Remove Users from Collection(s)

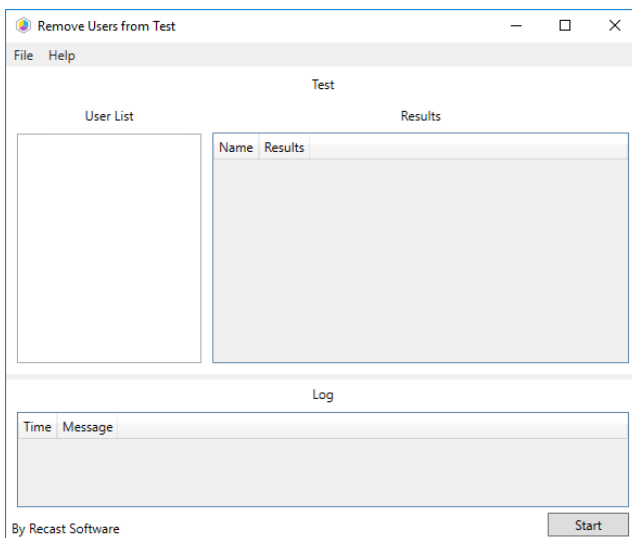

Last Modified on 05.06.25

The **Remove Users from Collection(s)** tool allows administrators to remove specific users from an existing collection.

To remove users from collections:

1. In your Configuration Manager console navigation panel, click **Users**.
2. Right-click on a user collection.
3. Click **Right Click Tools > Remove Users from Collection(s)**.
4. In the window that opens, add users to the **User List** and click **Start**.

The **Results** section will display any actions taken. The **Log** section will update the status.

TIP: If you are having trouble adding users to collections, you can also add them using `domain\username` (two slashes) or `%username` .
