

# Send Unsent State Messages

Last Modified on 05.06.25

The **Send Unsent State Messages** tool sends state messages cached on the ConfigMgr Client to the ConfigMgr Server.

To run the tool:

1. Right-click on a device.
2. Select **Right Click Tools** > **Client Actions** > **Send Unsent State Messages**.

The window that opens displays progress and successful completion.

## Recast Permissions

ConfigMgr Client	Send Unsent State Messages
------------------	----------------------------

## Microsoft Permissions

- Requires that the target device has a working ConfigMgr client installed.
- Requires that the user running the ConfigMgr console has administrative access to the remote device.
- [Remote WMI](#) ports must be allowed through the firewall.
- If the 'Ping Computer Before Running Tools' option is set, [ICMP Echo](#) must be allowed through the firewall.
- If using a Recast Management Server with a proxy, the service account will need administrator permissions on the remote device.

One way around some of the permissions requirements and firewall rules is installing a [Recast Agent](#).
