Send Unsent State Messages
The **Send Unsent State Messages** tool sends state messages cached on the ConfigMgr Client to the ConfigMgr Server.

To run the tool:

1. In your Configuration Manager console, right-click on a device.

2. Click **Right Click Tools** > **Client Actions** > **Send Unsent State Messages**.

The window that opens displays progress and successful completion.

Recast Permissions

- Requires the Send Unsent State Messages permission on the ConfigMgr Client.

Microsoft Permissions

- Requires that the target device has a working ConfigMgr client installed.
- Requires that the user running the ConfigMgr console has administrative access to the remote device.
- Remote WMI ports must be allowed through the firewall.
- If the 'Ping Computer Before Running Tools' option is set, ICMP Echo must be allowed through the firewall.
- If using a Recast Management Server with a proxy, the service account will need administrator permissions on the remote device.

One way around some of the permissions requirements and firewall rules is installing a Recast Agent.
