

State Message Cache Cleanup

Last Modified on 11.28.22

The **State Message Cache Cleanup** clears state messages that are cached on the ConfigMgr Client.

This action can be run on single and multi-selected devices, or with a [similar tool designed for device collections](#).

To run this tool:

1. In your Configuration Manager console, right-click on a device.
2. Click **Right Click Tools > Client Actions > State Message Cache Cleanup**.

The window that opens displays progress and successful completion.

Recast Permissions

ConfigMgr Client	State Message Cache Cleanup
------------------	-----------------------------

Microsoft Permissions

- Requires that the target device has a working ConfigMgr client installed.
- Requires that the user running the ConfigMgr console has administrative access to the remote device.
- [Remote WMI](#) ports must be allowed through the firewall.
- If the 'Ping Computer Before Running Tools' option is set, [ICMP Echo](#) must be allowed through the firewall.
- If using a Recast Management Server with a proxy, the service account will need administrator permissions on the remote device.

One way around some of the permissions requirements and firewall rules is installing a [Recast Agent](#).
