# Add Device(s) to Collection

The **Add Device(s) to Collection** tool adds devices to an existing device collection. This tool can be run on single devices and multi-selected devices, or with a similar tool designed to be run on a device collection .

This tool makes a WMI API call to the SMS provider.

To run the tool:

1. In your Configuration Manager console, right-click on a device.

2. Click **Right Click Tools** > **Client Tools** > **Add Device(s) to Collection** .

3. In the window that opens, enable **Match on name instead of ResourceID** to query ConfigMgr for the Resource ID that matches the computer name (optional).
   TIP: This option is useful when launched from tools that may not have the Resource ID available, such as the LAPS or BitLocker Compliance tools.

4. Click **Start** to run the tool.

A progress window displays devices by status, with an option to **Rerun** the tool.

Recast Permissions

ConfigMgr Server	Get All Device Collections and Add Devices to Collection

Microsoft Permissions

- This action requires that the user running the tools has sufficient ConfigMgr permissions to add the device to the collection.
- If a Recast Server is being used with a Service Account, that account also needs these permissions.
