RECAST SOFTWARE

Rerun Deployment

Last Modified on 11.29.23

The **Rerun Deployment** tool allows a console user to rerun a package or task sequence deployment on a device or multi-selected devices.

NOTE: To run deployments that are not package or task sequence deployments, use Remote Software Center.

This tool uses Remote WMI.

To run this tool:

1. In your Configuration Manager console, right-click on a device.

2. Click **Right Click Tools** > **Client Tools** > **Rerun Deployment**.

3. Rerun a package or a task sequence by right-clicking on it.

Recast Permissions

ConfigMgr Client	Rerun Deployment

Microsoft Permissions

- This tool requires administrator permission on the remote device. If using a Recast Management Server with service account, the service account needs administrator permission on the remote device.
- This tool requires remote WMI.
