Show Collections – Advanced

Last Modified on 01.06.26

The **Show Collections – Advanced** tool lets a console user view information about the collections to which a device belongs. This tool can be run on single devices or multi-selected devices, but not on a device collection.

This tool uses [Remote WMI](#).

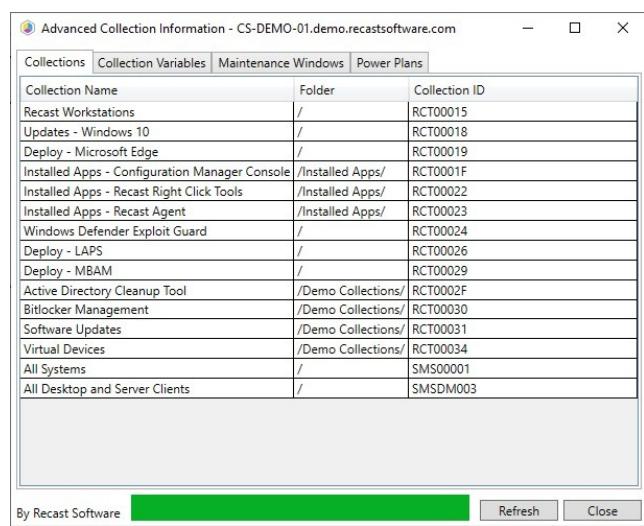

To run this tool:

1. Right-click on a device.
2. Select **Right Click Tools > Client Tools > Show Collections – Advanced**.

Running the action returns the following information for each collection:

- **Collections:** Folder, Collection ID
- **Collection Variables:** Folder, Variable Name, Value (if not hidden)
- **Maintenance Windows:** Folder, Maintenance Window Name, Description of maintenance schedule, Applies To, Start Time, Duration, Enabled (T/F)
- **Power Plans:** Folder, Apply Settings, Peak Plan Start/End/Duration, Peak Plan Name, Non-Peak Plan Name, Wakeup Time

To remove a device from a collection, right-click on the device on the **Collections** tab and click **Remove from Collection**.

Microsoft Permissions

- This action requires that the user has permissions in ConfigMgr to read properties about collections and remove devices from a collection. If using a Recast proxy to route actions, the same permissions are required for the service account.
