

Running Processes

Last Modified on 05.06.25

The **Running Processes** tool lists all processes running on a remote device.

This tool uses [remote WMI](#).

To run the tool:

1. Right-click on a device.
2. Select **Right Click Tools > Console Tools > Running Processes**.

To stop a process:

1. Right-click on a process and click **Kill Process**.
2. Confirm the action.

Recast Permissions

SystemInformation plugin	GetRunningProcesses permission
	KillProcess permission

Microsoft Permissions

- The Running Processes tool uses remote WMI to list the processes and requires that the user running the tool is an administrator on the remote machine.
- If Recast Management Server is used with a service account, the service account must have administrator permissions on the remote device.
