

Console Tools: Running Processes

List all processes running on the remote device.

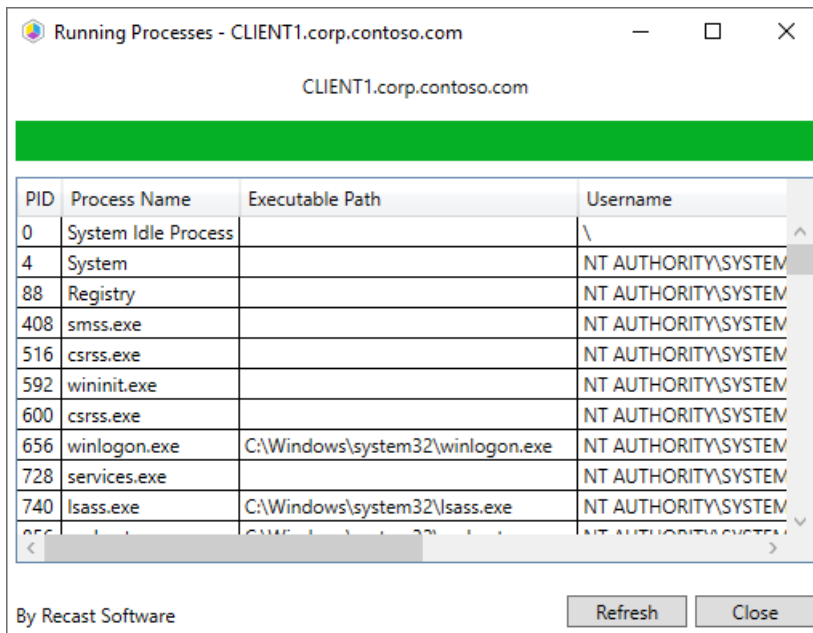

Navigation

Navigate to the Running Processes Tool by right clicking on a device, selecting Recast RCT > Console Tools > Running Processes:

Screenshot

When the action is run, the following dialog box will open:

Recast Permissions

System Information	Get Running Processes
System Information	Kill Process

Microsoft Permissions

- The Running Processes tool uses remote WMI to list the processes and requires that the user running the tool is an administrator on the remote machine. If a Recast Server with a service account is used, the service account will need to have administrator permissions on the remote device.
