RECAST SOFTWARE

Running Processes

Last Modified on 11.26.24

The **Running Processes** tool lists all processes running on a remote device.

This tool uses remote WMI.

To run the tool:

1. In your Configuration Manager console, right-click on a device.

2. Click **Right Click Tools** > **Console Tools** > **Running Processes**.

To stop a process:

1. Right-click on a process and click **Kill Process**.

2. Confirm the action.

Recast Permissions

SystemInformation plugin	GetRunningProcesses permission
	KillProcess permission

Microsoft Permissions

- The Running Processes tool uses remote WMI to list the processes and requires that the user running the tool is an administrator on the remote machine.
- If Recast Management Server is used with a service account, the service account must have administrator permissions on the remote device.
