**RECAST** SOFTWARE

# Machine Policy Retrieval and Evaluation Cycle — Client Action on Collection

Last Modified on 05.06.25

The **Machine Policy Retrieval and Evaluation Cycle** initiates policy retrieval from the client outside its scheduled polling interval. The default interval is 60 minutes. Triggering immediate policy retrieval is useful in a troubleshooting scenario or when testing.

This action can be run on device collections, or using a  similar tool designed for single and multi-selected devices .

To run this tool:

1. Right-click on a device collection.

2. Select **Right Click Tools** > **Client Actions on Collection** > **Machine Policy Retrieval and Evaluation Cycle** .

The window that opens displays progress and completion according to success.

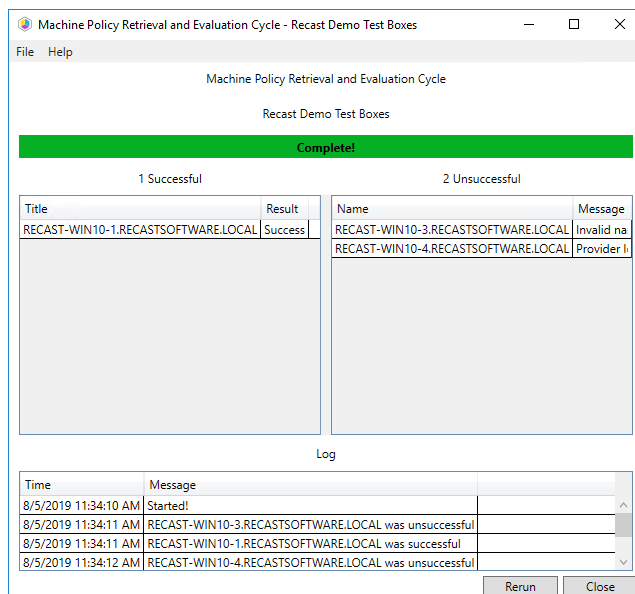

## Recast Permissions

| ConfigMgr Client plugin | Machine Policy Retrieval and Evaluation Cycle permission |
| --- | --- |

## Microsoft Permissions

- Requires that the target device has a working ConfigMgr client installed.

- Requires that the user running the ConfigMgr console has administrative access to the remote device.

- Remote WMI ports must be allowed through the firewall.

- If the 'Ping Computer Before Running Tools' option is set, ICMP Echo must be allowed through the firewall.

- If using a Recast Management Server with a proxy, the service account will need administrator permissions on the remote device.

One way around some of the permissions requirements and firewall rules is installing a Recast Agent.
