

Send Unsent State Messages — Client Action on Collection

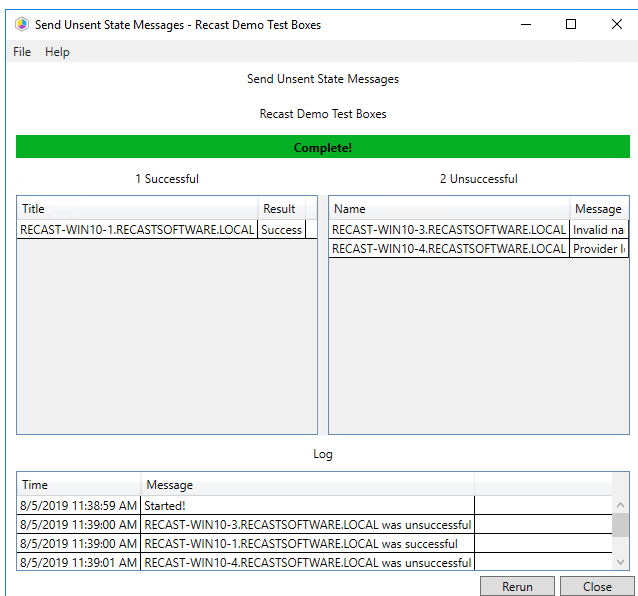

Last Modified on 11.28.22

The **Send Unsent State Messages** tool sends state messages cached on the ConfigMgr client to the ConfigMgr server.

To run the tool:

1. In your Configuration Manager console, right-click on a device collection.
2. Click **Right Click Tools > Client Actions on Collection > Send Unsent State Messages**.

The window that opens displays progress and completion according to success.

Recast Permissions

- Requires the Send Unsent State Messages permission on the ConfigMgr Client.

Microsoft Permissions

- Requires that the target device has a working ConfigMgr client installed.
- Requires that the user running the ConfigMgr console has administrative access to the remote device.
- [Remote WMI](#) ports must be allowed through the firewall.
- If the 'Ping Computer Before Running Tools' option is set, [ICMP Echo](#) must be allowed through the firewall.
- If using a Recast Management Server with a proxy, the service account will need administrator permissions on the remote device.

One way around some of the permissions requirements and firewall rules is installing a [Recast Agent](#).
