Recast

Clear Cache — Client Tool on Collection

The **Clear Cache** tool clears the client cache on a remote device.

This tool can be run on device collections, or with a similar tool designed for single and multi-selected tools

To run this tool:

1. Right-click on a device collection.

2. Select **Right Click Tools** > **Client Tools** > **Client Information**.

3. On the **Cache** tab, select client(s) cache and click **Clear Cache**.

4. Click **Yes** to confirm the change.

The window that opens displays progress and completion according to success.

Recast Permissions

Plugin	Permissions
ConfigMgrClient	ClearCache

Microsoft Permissions

- Requires Administrator permissions on the remote device.
- If a Recast Management Server is used with a proxy, that service account also needs admin permission on the remote device.
- Requires Remote WMI access.
- Requires access to connect to the C$ share.
