

# Run Client Check — Client Tool on Collection

Last Modified on 05.06.25

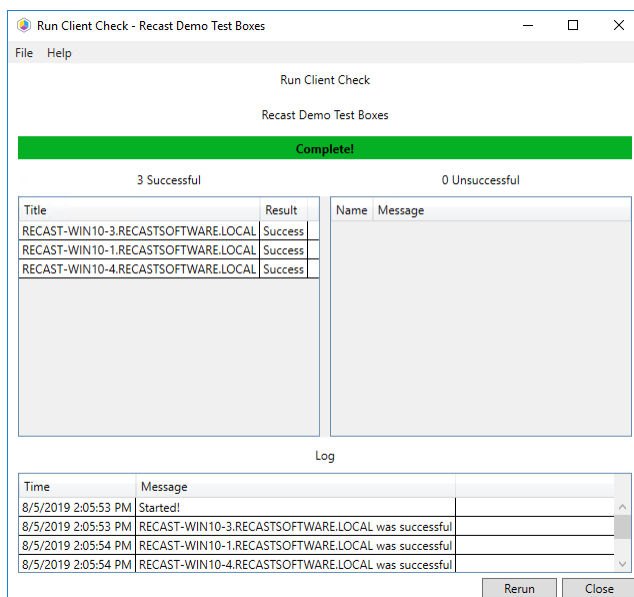

The **Run Client Check** tool runs the built-in ConfigMgr Client health checks.

This tool can be run on device collections, or with a [similar tool designed for single and multi-selected tools](#).

To run the tool:

1. Right-click on a device collection.
2. Select **Right Click Tools** > **Client Tools on Collection** > **Run Client Check**.

Running the action kicks off the Client health checks automatically and returns either a successful or unsuccessful result.

## Recast Permissions

ConfigMgr	RunClientCheck
-----------	----------------

## Microsoft Permissions

- Requires administrator permission on the remote device.
- If using a Recast Management Server with a proxy, the service account needs administrator permission on the remote device.

- This tool requires remote WMI access.
