

Restart Collection — Console Tool on Collection

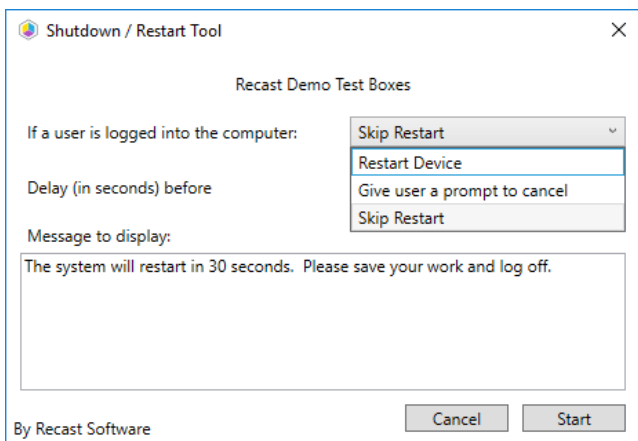

Last Modified on 01.24.23

The **Restart Collection** tool initiates a restart of a targeted collection.

This action can be run on device collections. A similar tool [runs this action on single and multi-selected devices](#).

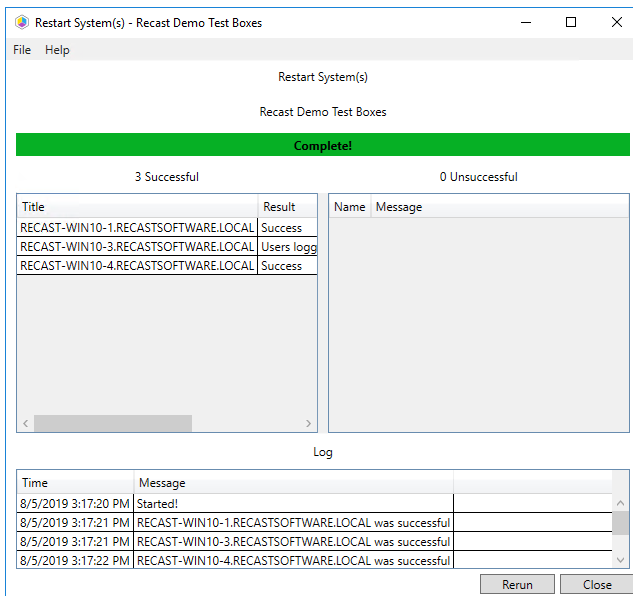

To run the tool:

1. In your Configuration Manager console, right-click on a device collection.
2. Click **Right Click Tools > Console Tools on Collection > Restart Collection**.
3. In the **Shutdown / Restart Tool** window, choose to **Restart Device**, **Give user a prompt to cancel**, or **Skip Restart** when a user is logged in while attempting the restart action.
4. Set a **Delay (in seconds) before** restart.
5. Customize the **Message to display** prior to restart (optional).

6. Click **Start** to initiate restart sequence.

The window that opens shows progress and completion according to success or failure.
