

System Information — Console Tool on Collection

Last Modified on 05.29.23

The **System Information** tool displays a variety of system information and allows several right click actions.

This action can be run on device collections, or with a [similar tool designed for single and multi-selected devices](#).

To run the tool:

1. In your Configuration Manager console, right-click on a device collection.
2. Click **Right Click Tools > Console Tools on Collection > System Information**.

System Information Tabs

The System Information tool displays data in the following categories: Operating System, Hardware, Applications, Windows Updates, Services, Drivers, User Profiles, Local Group Members, Batteries.

For more detail about the data displayed for each category, see [System Information](#).

NOTE: When running System Information against multiple devices or a collection, each of the devices will be represented in the results and can be multi-selected.

Recast Permissions

System Information	Read Only
--------------------	-----------

Microsoft Permissions

- Requires local administrator permissions on the remote devices.
- If using a Recast Management Server with a proxy, the service account needs local administrator permissions on the remote devices.
- This tool requires Remote WMI and Remote Registry access.
