

Verify Your SQL Server Port

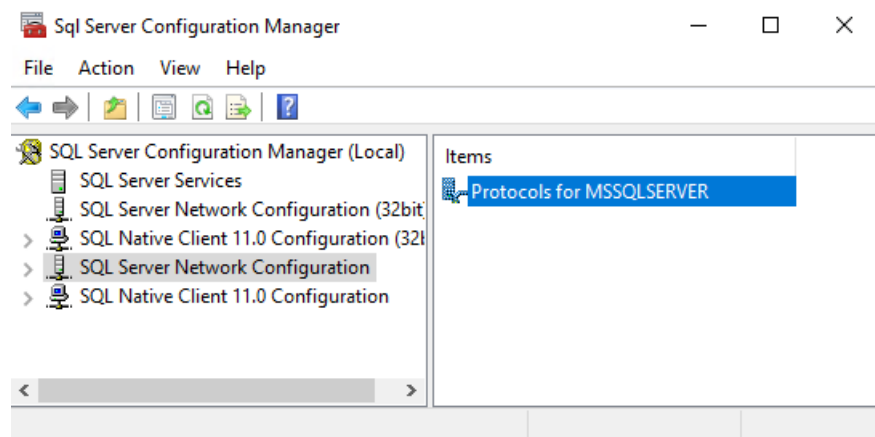

Last Modified on 04.20.23

To check your SQL Server port:

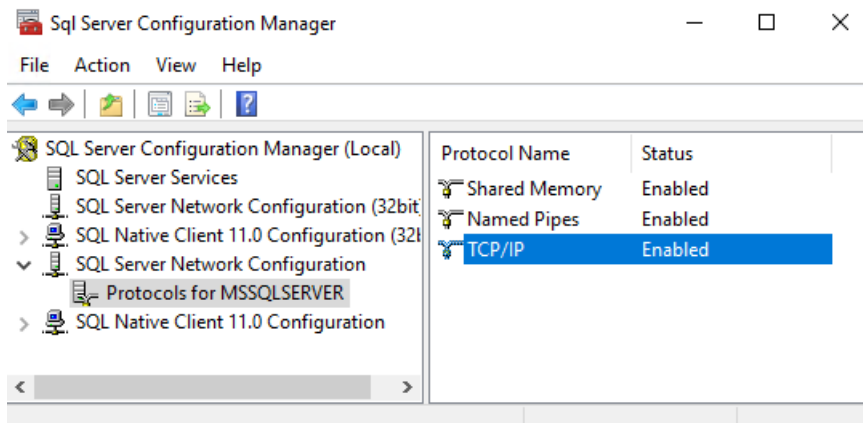

1. Open the SQL Server Configuration Manager.

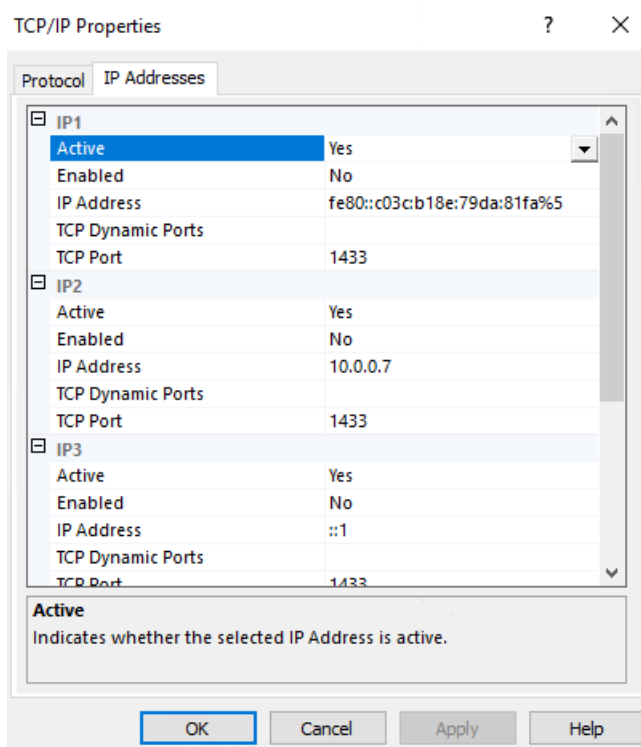

2. Click **SQL Server Network Configuration** and open **Protocols for MSSQLSERVER**.

3. Open **TCP/IP**.

4. Select the **IP Addresses** tab.

5. In the **IPAll** section, you'll see the TCP port being used in your environment. For most people this will be 1433, but it can be changed.
