

Servers, Shares and Connections

Last Modified on 01.30.23

This report returns a list of servers, shares and connections based on the selected prompt options.

Three wild card prompts help narrow down your choices for computer collection, server and share. Next to these wild card prompts are three corresponding prompts which then let you specify the exact collection, server and share that you want to see more information about.

The top section of this report provides details about the server and share that match the prompts. The lower section provides a list of all the users, limited by collection, connected to the server and share listed within the top section of the report.

From here, you can drill through to the **List of Mapped Drives by Size**.
