

Filter

Filtering in grids allow you to specify rules to control which rows are shown in the grid. Specifying filter on column will show rows on the grid where row values in the filtered column meet the specified filter rule.

The screenshot shows a dialog box titled "Privilege Manager" with a search icon and the instruction "Select filter action from the list and then specify filter if needed." The dialog contains the following fields:

- "Column to filter: Members" (text label)
- "Filter action: Equal to" (dropdown menu, marked with a blue circle containing the number 1)
- "Filter: |" (text input field, marked with a blue circle containing the number 2)

At the bottom right, there are two buttons: "Set filter" and "Cancel". At the bottom left, the text "Window loaded." is displayed.

To apply a filter:

1. Select the **Filter action** to perform. The available filtering actions depends on the column data type. For example, the 'More than' filter action is only available to columns where data type is numeric or date.
2. If a selected filter action requires a **Filter** value, specify (or select in certain data types) the filter value to be used. Filter values are case insensitive.
