

Modify a Category

The screenshot shows a dialog box titled "Privilege Manager" with a close button (X) in the top right corner. On the left side, there is a group icon consisting of three stylized human figures. The main text area contains the following instructions: "Select category for the group. Specify a name for the local group that you want to managed. You can manage only local groups on computers. Optionally you can specify a display name that will be shown on Privilege Manager and/or description for". Below this text are four input fields: "Category:" with a dropdown menu showing "System"; "Name:" with a text box containing "S-1-5-32-549"; "Display name:" with a text box containing "Server Operators"; and "Description:" with a text box containing "A built-in group that exist". At the bottom right of the dialog are two buttons: "Change" and "Cancel". A status bar at the very bottom of the window reads "Window loaded."

1. Select a parent **Category** for the category. Specifying parent category allows you to create a category hierarchy. If a category should be created at the root level, select '(none)' as a parent category.
2. Specify a category **Name**.
3. Click **Change** to apply your modifications.
