

Workgroup Computers Overview

In the portal's **Workgroup computers** section, you can specify workgroup computers to be managed. Workgroup computers must be managed individually so management rules must be created for each workgroup computer.

Workgroup computer functions:

Add Workgroup: Create a new workgroup computer. See [Create a workgroup computer](#).

Add Category: Create a new category to organize local groups, local users and workgroup computers. See [Create a Category](#).

Modify: Modify an existing category by right-clicking a category folder. For more information, see [Categories](#).

Modify an existing workgroup computer by right-clicking on it. See [Modify a workgroup computer](#).

Delete: Delete an existing category by right-clicking a category folder. For more information, see [Categories](#).

Delete an existing workgroup computer by right-clicking on the workgroup computer and confirming the deletion. All workgroup computer management rules are deleted if you delete the workgroup computer!
