

Domain Account

Last Modified on 08.29.23

Starting from Recast Privilege Manager client version 3.1.5000 also domain accounts can be added temporary to Administrators local. Privilege Manager administrator can limit domain account activation type for specific users (like service desk personnel).

When action requiring administrator level permissions is executed Windows by default shows User Account Control window where credentials are provided to execute the action. This User Account Control has Recast Privilege Manager option when Privilege Manager credential provider has been installed to client.

Click **More choices** to show Recast Privilege Manager credential provider

1. Click **Recast Privilege Manager** to select Privilege Manager credential provider
2. Select **Run with domain account** from dropdown list
3. Specify the reason why temporary administrator access is required
4. Specify credentials of the domain account that will be granted temporary administrative permissions and use pre-windows 2000 account format for user account
 - Example: domain\username
5. Click **Yes** button to execute action with temporary user account
