# Proxy Permissions

Last Modified on 08.20.25

The permission set required for a proxy service account differs depending on how you're using a Recast Proxy.

If you haven't set up the required proxy permissions prior to installing Recast Management Server or Recast Proxy, you can skip the installer's **Configuration Manager Configuration** page by removing any information from the text fields, selecting **Test ConfigMgr Connection** and the **Skip ConfigMgr Verification** checkbox, and clicking **Next.**

## Right Click Tools

| | |
|---|---|
| Access web dashboards and trends<br><br>Schedule Builder actions<br><br>Schedule kiosk profile application | • Local admin access on the server where the proxy is being installed<br>• Read permissions in Active Directory<br>• **db_datareader** in the Configuration Manager SQL server database<br>• Read-only access to the Configuration Manager console (**Read-only Analyst** security role in ConfigMgr) |
| Run actions as a service account | • Local admin access on any device that actions will be run against<br>• Read/Write permissions in Active Directory (Write only required to delete devices from AD)<br>• Appropriate ConfigMgr Security Role for intended actions in the Configuration Manager console (Full Administrator for all actions)<br>• Permission to MBAM, if applicable |
| Elevate permissions | • Local admin access on all devices managed by Right Click Tools |
| Add or remove from collections | • Permission to modify a collection in Configuration Manager<br><br>configmgr collection > modify permission |
| Fast Channel support | • Permission to run scripts in Configuration Manager<br>• If using **Read-only Analyst** in ConfigMgr as your base security role, also grant the following privileges:<br>Collection > Run Script = Yes SMS Scripts > Read = True |

# Right Click Tools Insights

| Collect warranty information | • Local admin access on the server where the proxy is being installed<br><br>• Read permissions in Active Directory<br><br>• **db_datareader** in the Configuration Manager SQL server database<br><br>• Read-only access to the Configuration Manager console (**Read-only Analyst** security role in ConfigMgr)<br><br>  **NOTE**: These permissions match those required to access web dashboards and trends in Right Click Tools<br><br>• Internet access for the proxy account in order for the Recast Management Server to reach our API at **https://warranty.recastsoftware.com** over TCP 443 |
|---|---|
| Collect warranty information if RMS is installed on a server other than your ConfigMgr SQL database | • Add proxy account to the **SMS_SiteSystemToSiteServerConnection_MP_<YourSiteCode>** local group on that server, allowing it to read/write to your **inboxes\auth\ddm.box** |

# Right Click Tools Privileged Access

**NOTE**: Privileged Access does not require a Configuration Manager service connection.

| For all Privileged Access features | • Local admin on the server where the proxy is being installed<br><br>• Read permissions in Active Directory |
|---|---|

# Right Click Tools Patching

| MECM Integration | • Grant any of the following built-in roles/role combinations to the proxy account:<br>    ◦ Full Administrator<br>    ◦ Operations Administrator<br>    ◦ Application Administrator **and** Compliance Settings Manager<br>    ◦ Application Administrator **and** Read-only Analyst<br><br>• Grant modify permissions to the SMB share (UNC path) that will be used to store downloaded applications<br><br>• Access to the necessary external domains. See System Requirements. |
|---|---|

| Intune Integration | <ul><li>Grant modify permissions to the SMB share (UNC path) that will be used to store downloaded applications</li><li>Access to the necessary external domains. See System Requirements.</li></ul> |
| --- | --- |

**NOTE**: Group Managed Service Accounts (gMSAs) are not currently supported.
