

Redistribute Failed Transfers

Last Modified on 04.23.24

The **Redistribute All Failed Content Transfers** tool re-attempts all failed content transfers.

See [required permissions](#).

To locate the tool:

1. In your Configuration Manager console, right-click on a distribution point.
2. Click **Right Click Tools > Redistribute All Failed Content Transfers**.
3. Confirm the action.

NOTE: Running this action for a large number of failed transfers can impact system performance. Before launching this action, consider its timing.
