

Client Tools

These tools can be run on single and multi-selected devices.

To run a tool on a device collection, see [Client Tools on Collection](#).

[Remote Software Center](#)

View and install deployed applications, programs, and available software updates, and view and run deployed task sequences.

[Add Device\(s\) to Collection](#)

Adds single or multi-selected devices to a device collection.

[Change Cache Size](#)

Displays the current cache size and lets you enter a new one.

[Clear Cache](#)

Clears the client cache on a remote device.

[Client Information](#)

Displays general information and available actions for the ConfigMgr client, as well as data on components, caches, applications, execution history, and boundaries.

[Install Missing Software Updates](#)

Displays required or available software updates not currently installed on a device, allowing a user to install deployed updates.

[Open Client Installation Log File Folder](#)

Opens the file location of the client install log on a remote device.

[Open Client Log File Folder](#)

Opens the file location of the client log on a remote device.

[Refresh Updates Compliance State](#)

Refreshes the update compliance state of a device in ConfigMgr.

[Repair Client](#)

Kicks off the RepairClient functionality in the SMS_Client WMI class.

[Rerun Deployment](#)

Reruns a package or task sequence deployment.

[Restart SMS Agent Host Service](#)

Restarts the ConfigMgr client on a device.

[Run Client Check](#)

Kicks off ConfigMgr Client health checks.

[Show Collections - Advanced](#)

Displays information about the collections to which a device belongs.

[Stop ConfigMgr Client Activities](#)

Immediately stops the SMS Agent Host and kills any pending scnotification.exe processes.

[Uninstall SCCM Client](#)

Removes the ConfigMgr Client on a remote device.
