Install Application Manager for MECM

To install Application Manager for MECM:

1. Download the Application Manager installer and save it to your Configuration Manager server or to a remote server, which will be used for the deployment.

2. Run the installer.

3. When the installation wizard opens, click **Start install** and confirm the installation.

4. When the installation completes and the current version appears, click **Exit** to close the installer.

You can then launch the Application Manager Integration Client from the Windows start menu for First Run Configuration.
