

RECAST SOFTWARE

Uninstall Application Manager Legacy for MECM

Last Modified on 08.08.25

To uninstall Application Manager for MECM:

1. Navigate to **Control Panel > Programs > Programs and Features**.
2. Select **Recast Application Manager Integration Client** and uninstall it.
3. Remove the applications downloaded by Application Manager from your Configuration Manager console.
4. Terminate the AM for MECM service by going to <https://am.recastsoftware.com> > **Administration > Services**.

Make sure that you have a plan for updating or removing the Application Manager supported apps. All the applications distributed with the AM service will have their built-in update system disabled, meaning that if you have no other tool or method to update the apps, they will not be updated.
