

Application Manager for WSUS System Requirements

Last Modified on 05.29.23

Application Manager Requirements

Operating System: Windows Server 2008 R2 or later

Disk space: 100Mb of free disk space

Microsoft .Net Framework: Version 4.8 or later

Network Requirements

Disk space: Network share for downloaded applications with at least 50Gb of free disk space

Permissions: Administrative-level user account on the machine where Application Manager is being installed

External Domains: Application Manager requires outbound access to two URLs

- amclients.recastsoftware.com
- recastpackages.file.core.windows.net

WSUS Requirements

Software: Version 3.2.7600.226 or later

Configuration:

- [Automatic approval setting](#)
- [WSUS groups](#)

Certificate: A certificate defined for WSUS in order to deploy other than Microsoft updates. If there is no existing certificate, a new one can be created in the Application Manager interface. See [Publish Server Certificate](#).
