Install Application Manager for WSUS

To install Application Manager for WSUS:

1. Download the Application Manager installer and save it to your WSUS server.

2. Run the installer.

3. When the installation wizard opens, click **Start install** and confirm the installation.

4. When the installation completes and the current version appears, click **Exit** to close the installer.

The Application Manager Integration Client can then be launched from the Windows Start menu for First Run Configuration.
