

Add New Application

Last Modified on 08.25.23

Application Manager for WSUS lists all the third-party software linked to the current account. At the moment, changes to that list must be requested from Recast Software.

To modify the list of applications:

1. Open the **WSUS integration** tab in Application Manager for WSUS.
2. Select a WSUS group to modify then add or remove third-party software as desired. Click **Apply**.
