

Application Manager Legacy for Intune System Requirements

Last Modified on 08.20.25

To integrate Application Manager with Microsoft Intune, your system must meet the following prerequisites:

Intune

- Intune must be properly deployed and devices must be enrolled
- Required licenses acquired and allocated to users (Microsoft Intune, EM+S or Microsoft 365, for example)
- The applications deployed with Application Manager are not also deployed with a manually-created application or other third-party patching solution

Intune Management Extension

Win32 application management requires the Microsoft Intune management extension, which has its own [prerequisites](#):

- Windows 10 version must be 1607 or later
- Devices must be Azure Active Directory joined or Hybrid Azure Active Directory joined
- Devices must be enrolled with Microsoft Intune. The enrollment can be done automatically with a group policy object or manually by a user
