

New Deployment Process

Last Modified on 08.03.23

To create a new deployment process in Application Manager for Intune:

1. In the management portal, navigate to **Services > AM for Intune > Administration > Deployment processes**.
 2. Click to add a **New deployment process**.
 3. Enter a **Name** for the deployment process and click **Add**.
 4. Click on the deployment process name and select application(s) for the deployment process.
 5. Go to the **Deployments** tab and click **Add**.
 6. Find and select the Azure AD group you wish to use as a deployment target. Alternatively, you can use Intune's native **All Devices** or **All Users** target groups.
 7. In the **Edit** window, configure [deployment settings](#) and scheduling and click **Add**.
 8. Repeat steps to add additional target groups.
 9. Click **Start deployment now** to import the application to Intune.
