SCCM Client Health Dashboard

Last Modified on 08.18.25

The **SCCM Client Health Dashboard** offers a summary of each client's health status based on the Client Check information found in Configuration Manager.

Report Details

The dashboard includes counts of:

- **Total Clients**
- **SCCM Clients**: Computers connecting to Configuration Manager
- **Clients Missing the SCCM Client**: Computers discovered by Configuration Manager that don't have the Configuration Manager client installed
- **Inactive SCCM Clients**: Computers flagged as inactive by Configuration Manager
- **SCCM Client Policy Issues**: Computers with Active Directory (AD) logon that have not requested Configuration Manager policies
- **Hardware Inventory Issues**: Computers that have requested Configuration Manager policies but haven't returned hardware inventory in the past 168 hours

The **SCCM Client Versions** section displays the number of computers running on specific Configuration Manager versions.

The **SCCM Client Health Status** section displays counts of clients that Configuration Manager has flagged as healthy or in error.
