Distribution Point Issues

Last Modified on 12.02.25

You can identify potential distribution point issues using the Content Distribution Monitor or the Content Status tool.

Using the Content Distribution Monitor:

1. In your Configuration Manager console, navigate to **Assets and Compliance** > **Recast Software** > **Content Distribution Monitor**.

2. Click the red bar graph section showing content in **Error** to see detailed information.
   Alternatively, in the table, sort the **Distribution Status** column to see content in **Error**.

Using the Content Status tool:

1. In your Configuration Manager console, navigate to **Administration** > **Distribution Points.**

2. Right-click on a distribution point.

3. Click **Right Click Tools** > **Content Status**.

4. In the Content Information table that opens, sort the **State on this DP** column to see content in **Error**.

> **NOTE:** Right Click Tools doesn't currently send notifications when a distribution point is in error.
