

RECAST SOFTWARE

Service Connection Types

Last Modified on 03.18.24

Service connections are automatically detected when Recast Management Server is installed. They can also be added and managed on the **Service Connections** page in RMS.

Service Connection Types

- ActiveDirectory
- AzureActiveDirectory (Entra ID) — used by Recast's Privilege Manager
- MEMCM — Microsoft Endpoint Manager Configuration Manager
- MBAM — Microsoft BitLocker Administration and Monitoring
