

# View Routes

Last Modified on 03.16.23

The order of routes on the Recast Management Server **Routes** page reflects their priority. An action will run using the first route that offers a successful match, meaning that the route is available and that the user has the necessary permissions to run the action using that route.

For Right Click Tools, the route choice will always stop at the Console Extension route regardless of where it is located in the list. Any routes listed below the Console Extension route will only be used for administrative actions, such as those related to web dashboards and trends or warranty information collection.

For more information, see [Reorder Routes](#).
