

Create a Fast Channel Route

Last Modified on 03.27.25

To create a Fast Channel route:

1. In your Recast Management Server, navigate to **Administration > Routes**.
2. On the **Routes** page, click **Create**.

Routes

Routes determine where an action will be sent for execution. Drag and drop the routes to reorder them. They are priority based—the first route to successfully match is chosen.

Note: Routes apply only to device actions.

Route ID	Proxy Computer...	Proxy Username	Role	Scope ID	Route Type	Actions
1				1	Recast Agent	
25	DEV1	PROXY1	Administrators	1	Recast Proxy	
2				1	Console Extension	

3. In the **Create Route** window, set the route **Type** to **ConfigMgr Fast Channel**.
4. Enter **Recast Proxy** details.
5. Set the **Role** to **Administrators**.
6. Make sure that the **Limit to devices** option is enabled and [select devices to include](#).

Notes on Limiting Rules:

- You must limit the Fast Channel route to a specific device set. Using the default 'All Scopes' setting will not work.
- Target devices must fall within the constraints of the Fast Channel route limiting rules.
- The Recast Management Server must be aware that the target device is within Fast Channel route limiting rules.

The [discovery sync](#) keeps device and user data up-to-date in your Recast Management Server, but if a device was recently added to the limiting collection, you may wish to [manually trigger data synchronization](#).

7. Select the **Service Connection**. For more information, see [Service Connections](#).
8. Click **Create**.

To make actions run using the Fast Channel route, you must move that route from the bottom of the **Routes** table to a row that is above the Console Extension route. For details, see [Reorder Routes](#).
