RECAST SOFTWARE

Create a Fast Channel Route

Last Modified on 03.15.24

To create a Fast Channel route:

1. In your Recast Management Server, navigate to **Administration** > **Routes**.

2. In the main window, click **Create**.

3. In the **Create Route** window, set the route **Type** to **ConfigMgr Fast Channel**.

4. Enter **Recast Proxy** details.

5. Set the **Role** to **Administrators**.

6. Make sure that **Limit to devices** is enabled and select devices to include within the scope.

   Notes on Limiting to Devices:

   - You must limit the Fast Channel route to a specific scope. Using the default 'All Scopes' setting will not work.

   - Target devices must fall within the scope set up for the Fast Channel route.

   - The Recast Management Server must be aware that the target device is within the scope set up for the Fast Channel route. This may mean repopulating the scope, particularly when the device was recently added to that scope's limiting collections.

7. Set the **Refresh Interval**.

8. Select the **Service Connection**. For more information, see Service Connections.

9. Click **Create**.

To make actions run using the Fast Channel route, you must move that route from the bottom of the **Routes** table to a row that is above the Console Extension route.
