

# Additional Permissions For Application Group Feature

Last Modified on 05.09.23

The Application Group feature requires additional permissions to Azure AD and Intune tenants. Additional information can be found in the [Permissions](#) article.

To accept the permissions for **Recast Application Manager Intune Application Groups**:

1. [Log into your Microsoft account](#) with Global Administrator credentials.
2. **Accept** the requested permissions.

The screenshot shows a Microsoft permissions dialog box. At the top left is the Microsoft logo. Below it is a blurred header. The main heading is "Permissions requested" with the subtitle "Review for your organization". The application name is "Recast Application Manager Intune Application Groups" with a gear icon and the word "unverified" in blue. A warning states: "This application is not published by Microsoft or your organization." Below this, it says "This app would like to:" followed by a list of permissions: "Sign in and read user profile", "Read Microsoft Intune apps", "Read Microsoft Intune devices", "Read and write all group memberships", and "Read all devices". A note explains that accepting grants access to resources for all users and that the publisher has not provided links to their terms. It also provides a URL to change permissions: "https://myapps.microsoft.com. Show details". At the bottom, there is a link to report suspicious apps: "Does this app look suspicious? Report it here". At the very bottom are two buttons: "Cancel" and "Accept".
