

RECAST SOFTWARE

Application Support Schedule

Last Modified on 01.31.24

When new software application versions are added to the Application Manager catalog, they immediately become available for deployment.

Supported Applications

A software version remains in the catalog of supported applications as long as it meets the following criteria:

- It was released within the **past six months**
- It is one of the **two most recent releases**

Archived Applications

When an application no longer matches the criteria for support, it is archived and won't appear in the Application Manager catalog. In the unlikely event that you require access to an archived application version, you can request the installation media from [Recast Support](#).

Once an application has been archived for six months, it is entirely deleted and is no longer available from Recast Software.
