Privileged Access Version Upgrade

Last Modified on 2026-08-25

To get the latest Privileged Access releases, install new versions of Recast Management Server.

NOTE: All Recast components, including Recast Management Server, Recast Proxies, and Recast Agents, can be installed right over the existing version.

> **Before you upgrade**
>
> We encourage you to run a backup of your Recast Management Server infrastructure prior to installing a new version of Privileged Access.

To install an update:

1. Download the Recast Management Server installation file from theRecast Customer Portal.

2. Double-click the downloaded installation file.

3. Follow the installer prompts.

   NOTE: As long as your Recast Proxy is installed on the same computer, it will update when you run the Recast Management Server installer. If your Recast Proxy is installed on a separate device, you'll need to download and run the Proxy installer.

4. Update Recast Agents on target devices where group and/or user rules are applied using RCT Patching and/or Configuration Manager.
