Recast Agent Overview

A Recast Agent is a Windows service that runs as the local system. Agents are designed to be installed on every device within an organization.

Agent Uses

- Run actions on workgroup computers or on computers in untrusted domains

- Run actions on computers where the user does not have administrator permissions

- Run actions on computers that have more restrictive firewall rules in place

- Collect Endpoint Insights inventory data from devices

- Give users a way to self-elevate credentials with Privilege Manager

NOTE: An Agent Gateway is required for every 20K Recast Agents deployed.
