

Recast Agent Overview

Last Modified on 12.01.25

A Recast Agent is a Windows service that runs as the local system. Agents are designed to be installed on every device within an organization. After deploying Recast Agents, they can be used to run Right Click Tools actions or for [Fast Channel Support](#).

Agent Uses in Right Click Tools

- Run actions against devices in a different domain
- Run actions on workgroup computers or on computers in untrusted domains
- Run actions on computers where the user does not have administrator permissions
- Run actions on computers that have more restrictive firewall rules in place

NOTE: An [Agent Gateway](#) is required for every 20K Recast Agents deployed.
