

Assign an Endpoint Insights Administrator Role

Last Modified on 06.26.23

You can grant users and groups Recast permissions by assigning an administrator role. Your Recast software must be connected to Recast Management Server to set up role-based permissions.

Add Active Directory User or User Group

To add an AD user or user group:

1. In your Recast Management Server, navigate to **Administration > Permissions**.
2. In the main window, click **Add User** or **Add Group**.
3. In the window that opens, search for your AD name or AD user group and click the **Add** button.

NOTE: You can include a **wildcard (*)** to facilitate your search.

Wildcard examples:

- **John Connor** returns strings that match exactly
- **John C*** returns strings beginning with 'John C', such as '**John Connor**', '**John Connors**', and '**John Cranston**'
- ***Connor** returns strings ending with 'Connor', such as 'John **Connor**' and 'Carol O'**Connor**'
- ***Support*** returns strings that include 'Support' plus whatever is on the left and right, such as 'Customer **Support** Team' and 'Enterprise **Support** Group'

Assign User a Role

A user must be assigned at least one role.

To assign a user an administrator's role:

1. On the **Permissions** page, click the Edit icon to the right of the user.
 2. Under **Role Assignments**, select **Administrators**.
 3. To limit the user's permissions to a set of devices, enable **Limit this user to specific objects** and select a **Service Connection**.
 4. If desired, set a specific **Refresh Interval** for repopulating scopes. A longer interval uses fewer resources but also detects new users and devices less frequently.
 5. Click **Save**.
